#### Plan

- Explication du concept
- Deux types de navigation
  - Navigation hiérarchique
  - Navigation modale
- · Passage de données entre écrans

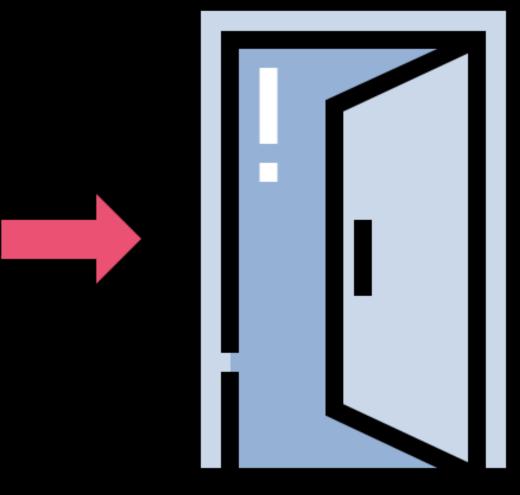

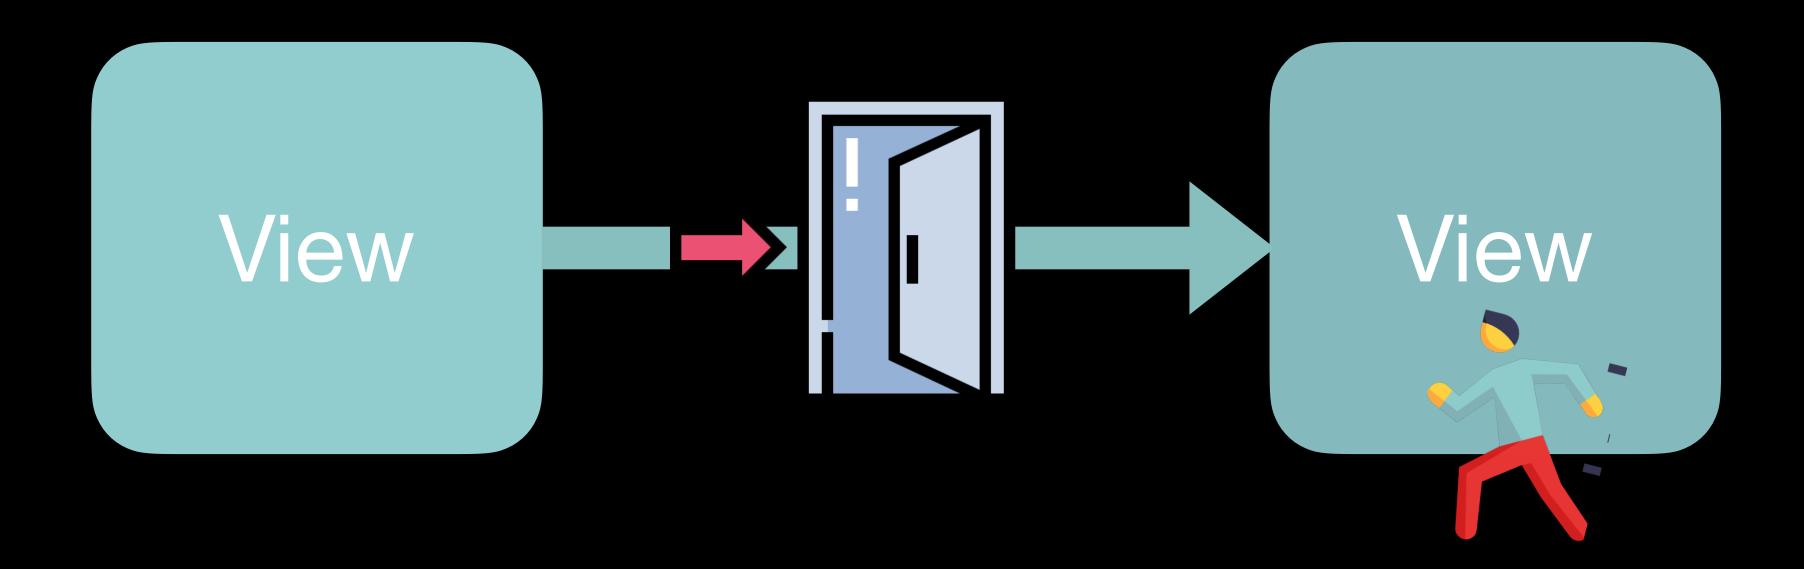

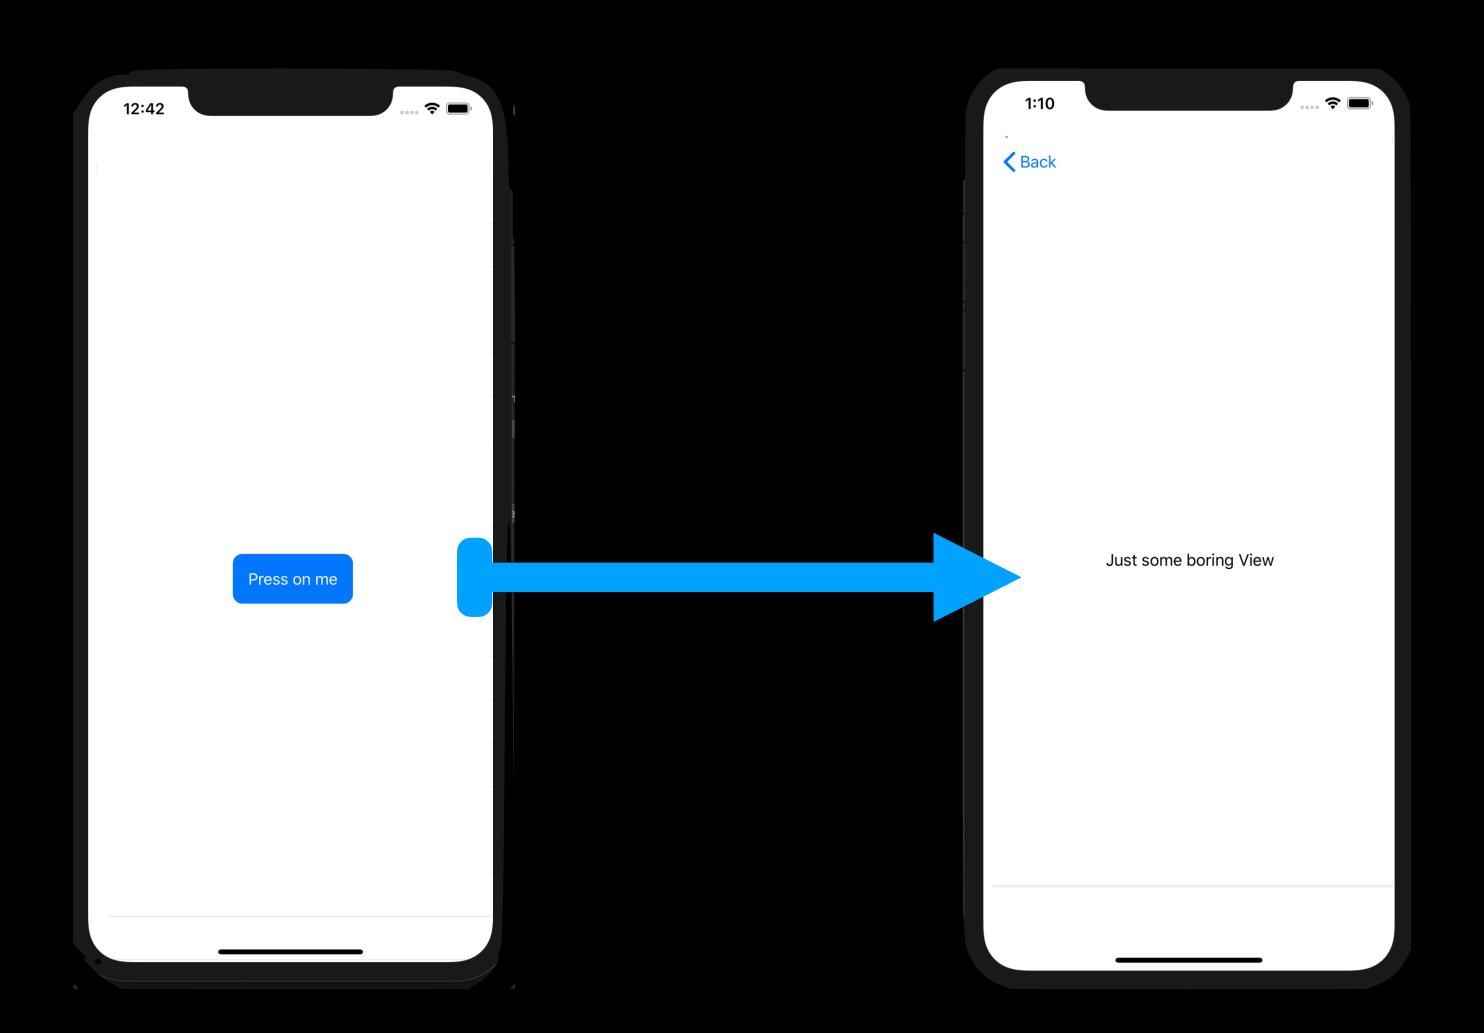

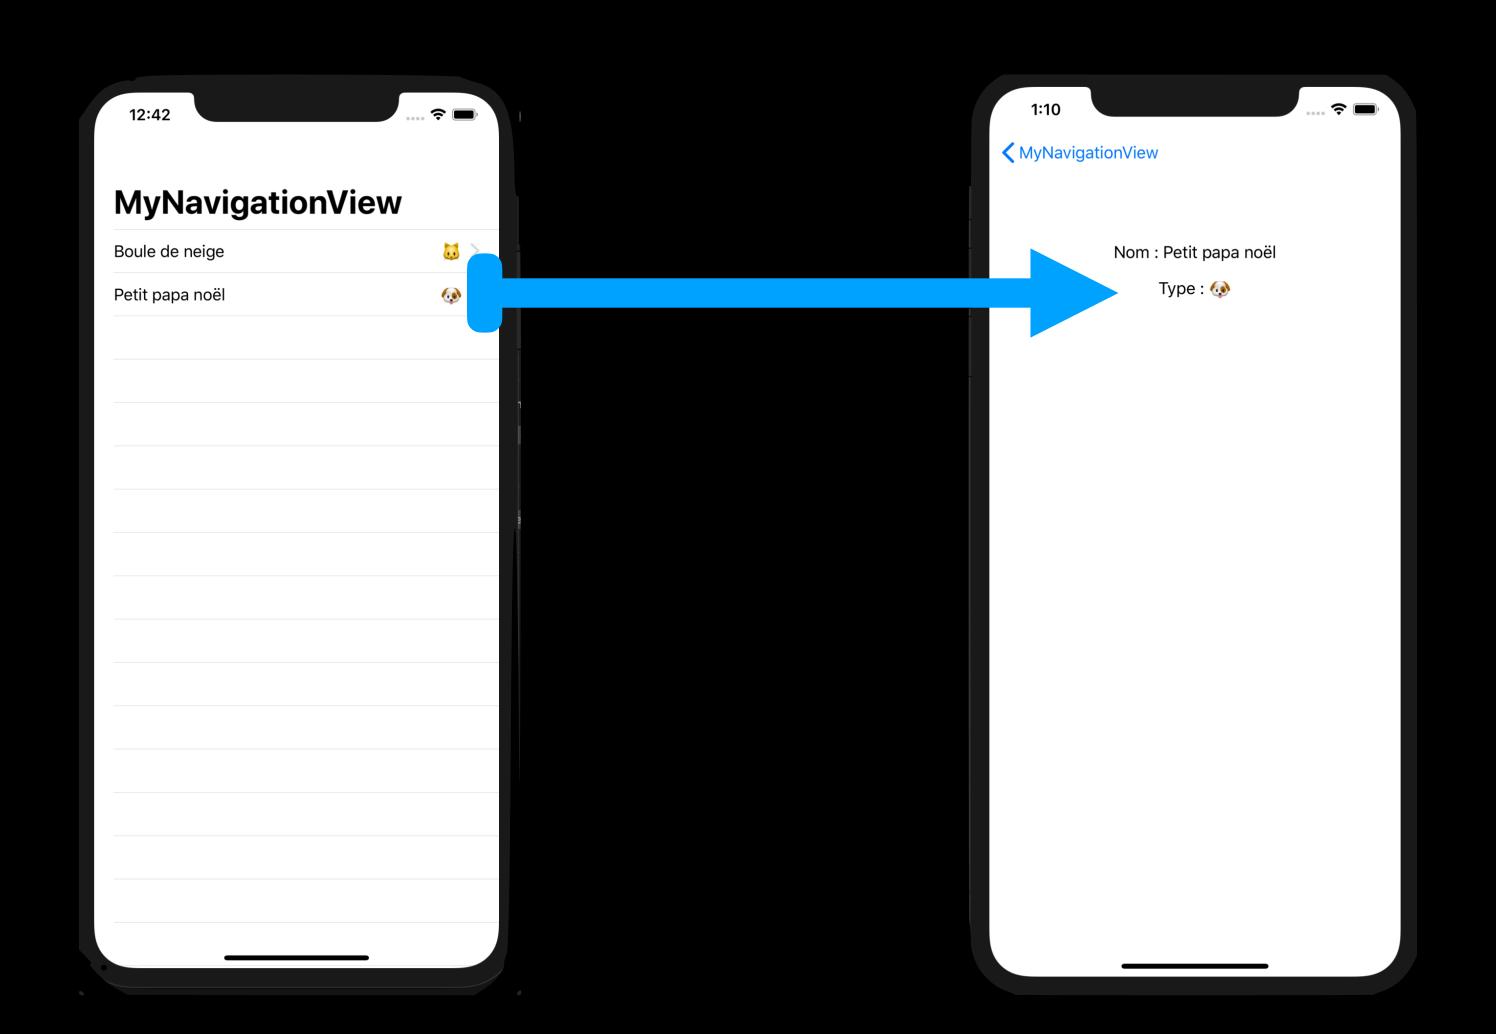

Et donc ?

Et donc ?

#### Navigation hiérarchique

- On passe d'une vue à l'autre par un chemin dans une hiérarchie de navigation
- Navigation View
- Navigation Link

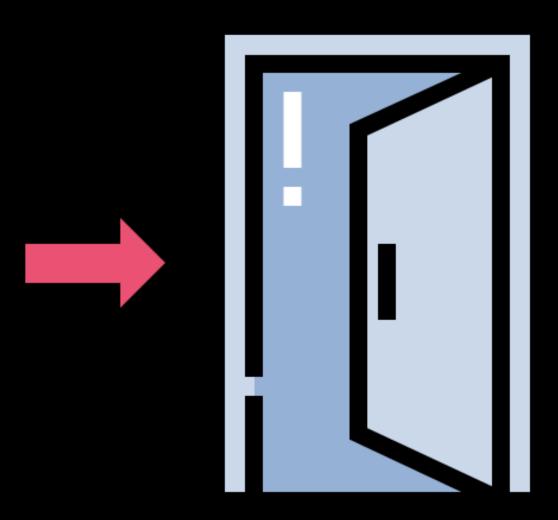

```
struct ContentView: View {
   var body: some View {
    Text("Hello, World!")
   }
}
```

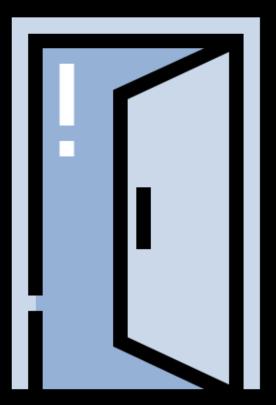

Hello World

```
struct ContentView: View {
   var body: some View {
     NavigationView {
        Text("Hello, World!")
        .navigationBarTitle("MyView")
     }
   }
}
```

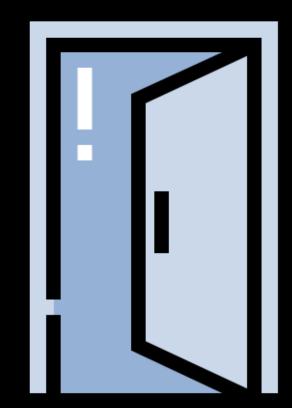

#### **MyView**

Hello World

Un composant qui déclenche une navigation lorsqu'on appuie dessus.

N'importe quelle vue peut faire l'affaire :

Button

List Row

Text

NavigationLink

```
struct ContentView: View {
   var body: some View {
     NavigationView {
        NavigationLink(destination: DumbledoreArmyView()) {
            Text("Dumbledore's Army")
        }
        .navigationBarTitle("MyView")
   }
}
```

#### **MyView**

**Dumbledore's Army** 

```
struct ContentView: View {
   var body: some View {
     NavigationView {
        NavigationLink(destination: DumbledoreArmyView()) {
            Text("Dumbledore's Army")
        }
        .navigationBarTitle("MyView")
    }
}
```

5:38

**K** Back

- Ron Weasley
- Hermione Granger
- Harry Potter
- Ginny Weasley
- Rubeus Hagrid
- Severus Snape

```
struct ContentView: View {
  var body: some View {
   NavigationView {
     NavigationLink(destination: DumbledoreArmyView(heroesList: [...])) {
        Text("Dumbledore's Army")
      navigationBarTitle("MyView")
```

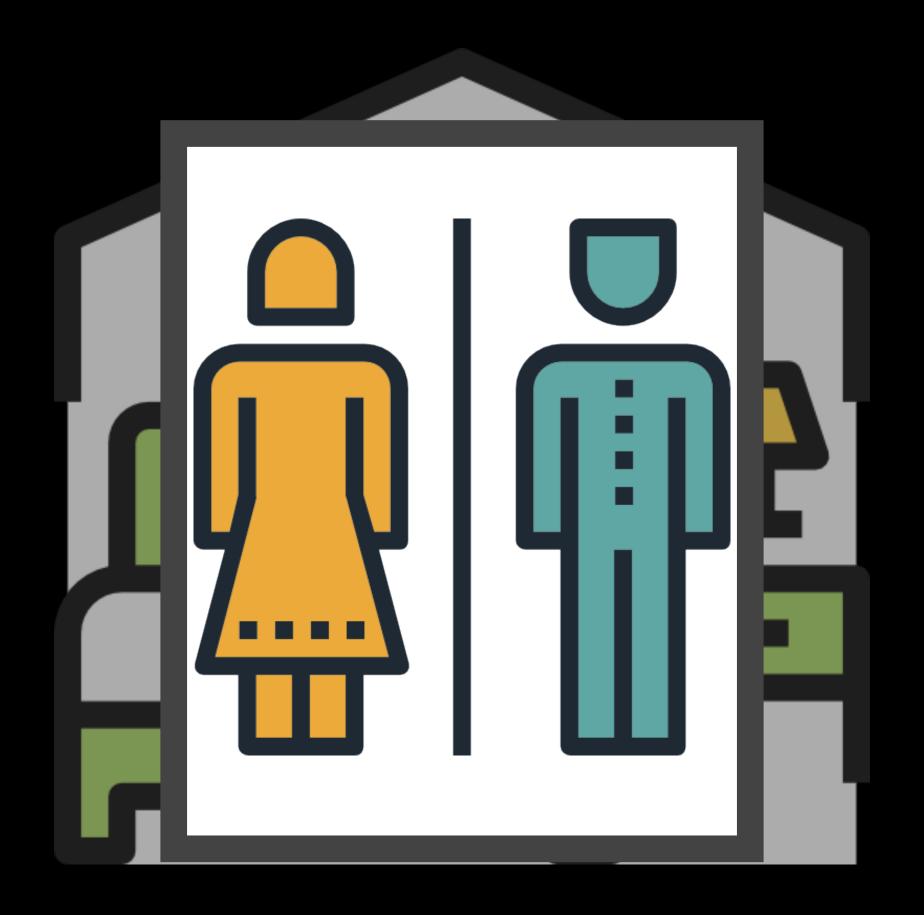

#### Unit 2—Lesson 6

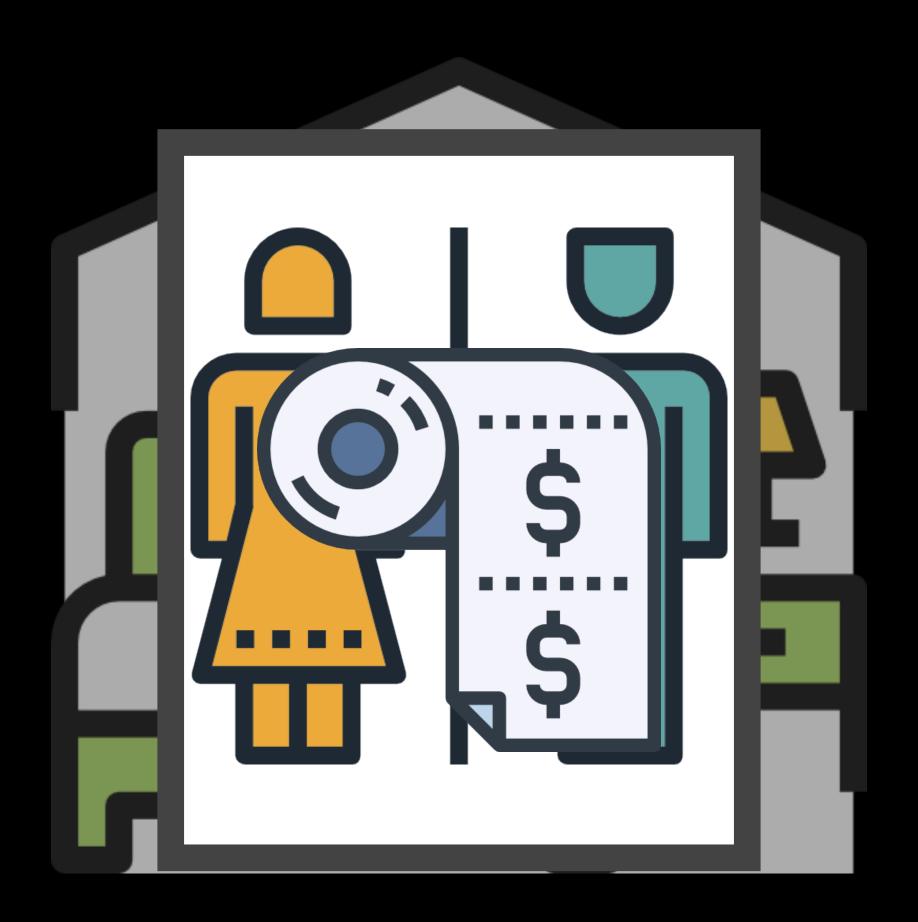

#### Lab: Navigation.playground

Open and complete the exercises in Lab - Navigation.playground

#### Action modale

- Présenter du contenu dans un mode temporaire
- Séparé du contexte précédent
- · Requière une <u>action explicite pour en sortir</u>

#### Action modale

Une action modale est:

- Simple
- Courte
- Focus sur un but
